

OmniVault for Auto Finance Companies

A Simple Solution for Complex Auto Lending Operations

In 2021, digital innovation is reimagining how consumers discover and purchase vehicles. The accelerated digitization of auto retailing enables more ways for consumers to finance vehicle purchases. While channel diversification drives higher origination volume and bottom line profitability, new channel relationships introduce increased process complexity. Multi channel origination entails tracking, auditing and analysis tasks across an array of digital and analog locations, increasing operational and business bottlenecks for warehouse lending partners and secondary market delivery. Leading auto finance providers increasingly require agile technology systems that enable seamless eContracting and post transaction asset management across any expanding array of channels.

OmniVault is a purpose-built solution for auto finance companies delivering a unified and secure digital repository to manage loans across channels. Built on the foundation of eOriginal's industry-leading digital lending solution, OmniVault enables lenders to securely manage digital assets throughout their entire post-execution lifecycle. Control and track access, manage status changes, and transfer control of Digital Original™ documents, which provide the highest levels of protection and compliance available in the industry.

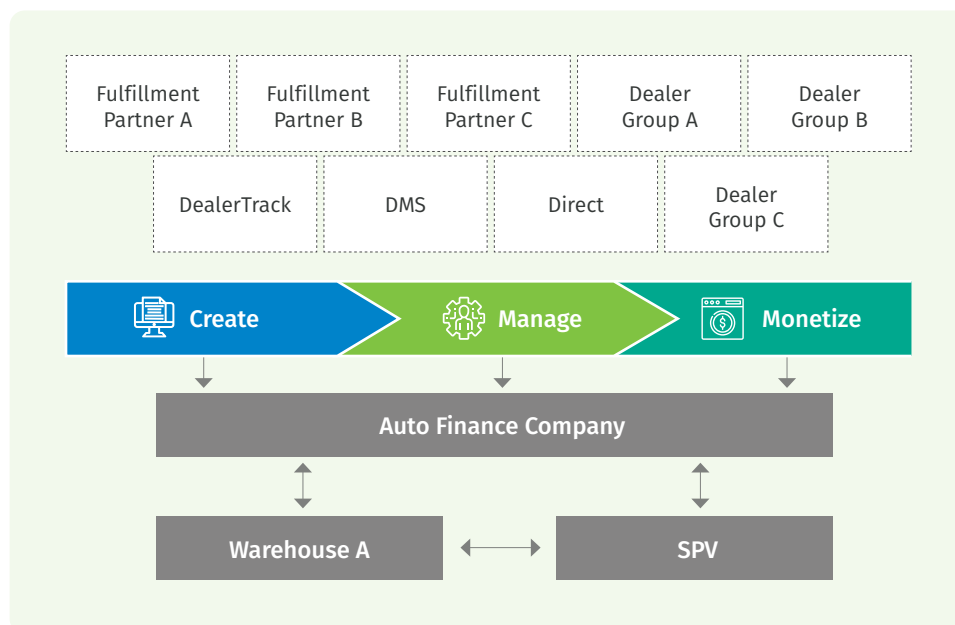

OmniVault delivers secure, streamlined and intelligent multi-channel digital loan portfolio management

OmniVault accelerates eContracting time-to-value by simplifying complex loan portfolio management.
[origination channel diversification]

Confidently embrace the future of digital auto lending with eOriginal's OmniVault

Benefits
